DETAILED ACTION

Claims

Claims 1-6 and 28-32 are canceled.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 8, typographical error "to Claim 7, wherein the the gate electrode" is amended to read - - to Claim 7, wherein the gate electrode - - .

The title is amended to read - - A method for fabricating an array substrate for a liquid crystal display with an insulating stack made from TFT layers between crossed conductors - - .

Allowable Subject Matter

Claims 7-27 are allowed.

The following is an examiner's statement of reasons for allowance:

As to claim 7, relevant prior art of record did not disclose, alone or in combination, a method of fabricating an array substrate for a liquid crystal display

Art Unit: 2871

device comprising the steps of: forming a first metal layer on a substrate; patterning the first metal layer to form a gate line, a gate electrode, a gate pad, a first shorting bar, and a second shorting bar; forming a gate insulation layer, a pure amorphous silicon layer, a doped amorphous silicon layer and a second metal layer to cover the patterned first metal layer; patterning the second metal layer and the doped amorphous silicon layer to form first, second and third through-holes and first and second grooves to expose a portion of the pure amorphous silicon layer, the first and second grooves creating an isolated portions of the second metal layer; forming a passivation layer to cover the patterned second metal layer;

forming a source electrode, a drain electrode, a data line, a data pad, an insulating segment, and first, second and third contact holes; and forming a pixel electrode, a first connector and a second connector of a transparent conductive material.

The above steps result in a novel structure for electrically insulating an electrical connector from a shorting bar. The steps are novel in that a portion of the second metal layer is retained in the stack of layers that serve as the electrical insulator between said electrical connector and said shorting bar.

The closest combination is Applicant's admitted prior art (APA) in view of Fulks provided by Applicant. Fulks discloses an electrical insulating stack. However, Fulks does not disclose a metal layer in the electrical insulating stack.

As to claims 8-27, they are directly or indirectly dependent upon claims with allowable subject matter above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
